

WORLD PROCESSING TOMATO COUNCIL

WPTC Research database

The World Processing Tomato Council (WPTC) which represents tomato processors and growers worldwide is keen to encourage communication between researchers and the industry in order:

- 1) To create fluent communication between the board of the WPTC and researchers involved in crop research activities, the quality of raw material studies and processing technologies.
- 2) To detect technology demands from the members of the Board of the WPTC for future investigation by the research sector.
- 3) To coordinate Congress and ISHS Symposium meetings
- 4) To validate research activities as needed on projects to be submitted by research groups to different financial sources.

Cosme Argerich, Chairman of the ISHS Working Group "Vegetable for Processing", as been nominated by the WPTC to ensure that these aims are achieved.

The WPTC has created a database of research articles which can be accessed freely on its website www.wptc.to (click on "**Research articles**"). The aim of this database is to centralize research articles or reports which have not been published in peer reviewed publications.

Scientists are invited to send their research articles or reports for posting on the website in a Word or Acrobat Reader format, together with an abstract, a list of keywords and a contact email address to:

Sophie Colvine, General Secretary of the WPTC at colvine@tomate.org.

Alternatively, you may send a link to your organization websites where research articles can be accessed directly.

World Processing Tomato Council
